Pam!

Director At-Large

ITS Texas

Howdy,

I am Pam Alummoottil and I am running to serve ITS Texas as a Director At-Large for the 2021-2023 term.

I have over 8 years of Traffic Engineering experience in both the private and public sectors. I have a Bachelor's in Civil Engineering from Texas A&M University and am currently a Traffic Engineer at the City of McKinney. I began my career in the private sector and I am very grateful for the project opportunities presented to me at the time, including designing a Diverging Diamond Interchange (DDI) traffic signal in Austin, TX to conducting a Traffic Impact Analysis (TIA) for the Kadena Air Base in Okinawa, Japan. Working for the public sector is helping me become a better traffic engineer because every decision made by our team directly impacts the citizens. Part of my job description involves helping the City Traffic Engineer to understand and develop innovative solutions to traffic concerns and I believe ITS Texas will help me further understand the capabilities of intelligent transportation systems.

Being involved with professional organizations has always been a passion of mine. During my years at Texas A&M I joined Society of Women Engineers (SWE) and served as President my last year. As a professional engineer, I have enjoyed being a member of Institute of Transportation Engineers (ITE) and serving as the Greater Dallas Section President. With each role and organization, I have grown as an individual and professional. I hope to share my experiences and knowledge with the ITS Texas Board and membership to help shape the future of the organization.

ITE and ITS Texas have many similar goals and I hope to continue my leadership experience with ITS Texas. Thank you for the consideration.
