

Flow Labs

Using High- Penetration Probe Data to Improve Signal Operations

ITS Texas / TexITE Joint Meeting 2024

We help engineering teams make data-driven decisions.

We are team of specialists in machine learning, artificial intelligence, and software engineering, with over 50 years of experience in developing cutting-edge transportation solutions designed to make roadways cleaner, clearer, and safer for everyone.

-
- The image shows a tablet displaying a software interface for 'Highway Corridor' analysis. The interface is dark-themed and includes a top navigation bar with tabs like 'Map View', 'Data View', and 'Analysis View'. The main area is divided into three sections:
- Map View:** A map on the left showing a road corridor with various data points. A red line highlights a specific section of the road.
 - Analysis & Diagnostics:** A panel on the right showing a table of metrics. The table has columns for 'Metric', 'Value', and 'Unit'. The 'Value' column is highlighted in blue.
 - Vehicle Behavior:** A panel on the right showing a table of metrics. The table has columns for 'Metric', 'Value', and 'Unit'. The 'Value' column is highlighted in blue.
- The 'Analysis & Diagnostics' table contains the following data:
- | Metric | Value | Unit |
|--------------------|---------|---------|
| Hourly Volume | 65,000 | VEP/Day |
| Segment Length | 100.0 | mi |
| Left Turn Ratio | 0.15 | % |
| Left Turn Delay | 1,070.0 | s |
| Left Turn Queue | 1,000.0 | ft |
| Right Turn Ratio | 0.15 | % |
| Right Turn Delay | 1,070.0 | s |
| Right Turn Queue | 1,000.0 | ft |
| Through Turn Ratio | 0.15 | % |
| Through Turn Delay | 1,070.0 | s |
| Through Turn Queue | 1,000.0 | ft |
| Left Turn Delay | 1,070.0 | s |
| Right Turn Delay | 1,070.0 | s |
| Through Turn Delay | 1,070.0 | s |
| Left Turn Queue | 1,000.0 | ft |
| Right Turn Queue | 1,000.0 | ft |
| Through Turn Queue | 1,000.0 | ft |
- The 'Vehicle Behavior' table contains the following data:
- | Metric | Value | Unit |
|--------------------|---------|---------|
| Hourly Volume | 65,000 | VEP/Day |
| Segment Length | 100.0 | mi |
| Left Turn Ratio | 0.15 | % |
| Left Turn Delay | 1,070.0 | s |
| Left Turn Queue | 1,000.0 | ft |
| Right Turn Ratio | 0.15 | % |
| Right Turn Delay | 1,070.0 | s |
| Right Turn Queue | 1,000.0 | ft |
| Through Turn Ratio | 0.15 | % |
| Through Turn Delay | 1,070.0 | s |
| Through Turn Queue | 1,000.0 | ft |
| Left Turn Delay | 1,070.0 | s |
| Right Turn Delay | 1,070.0 | s |
| Through Turn Delay | 1,070.0 | s |
| Left Turn Queue | 1,000.0 | ft |
| Right Turn Queue | 1,000.0 | ft |
| Through Turn Queue | 1,000.0 | ft |

PROBE DATA

Probe data provides insights into vehicle movements and road user experience

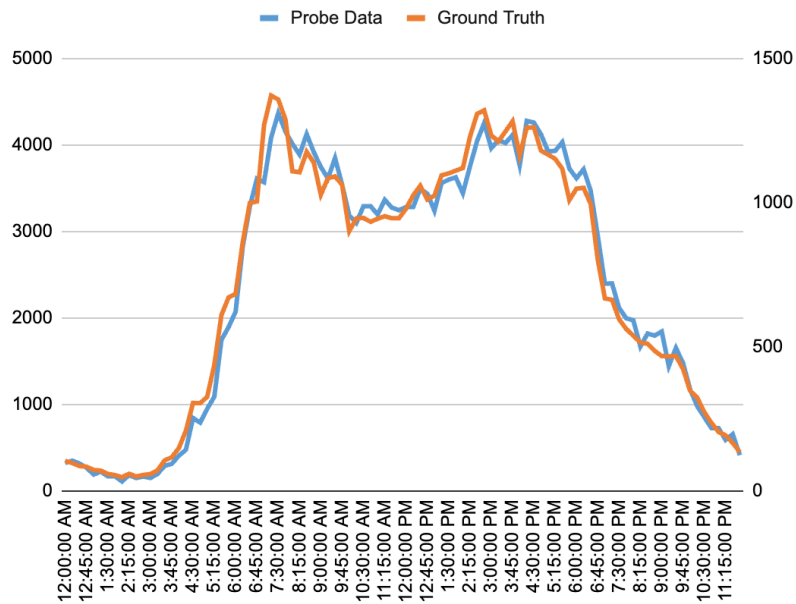

Penetration rates impact the consistency, accuracy, latency, and coverage of probe data

- High-penetration rates means consistently high data accuracy
- Higher coverage
- Lower data latency

HIGH- PENETRATION PROBE DATA

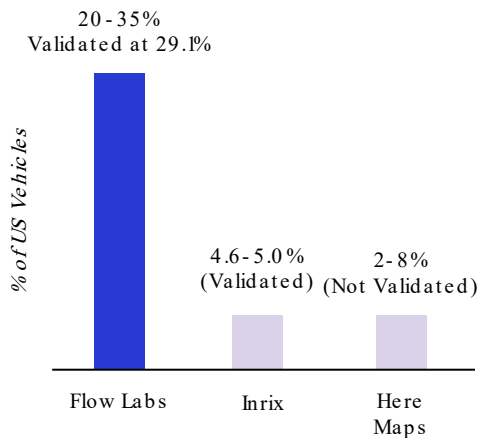

High- Penetration Probe Data (HPPD) can provide reliable, continuous data for traffic operations

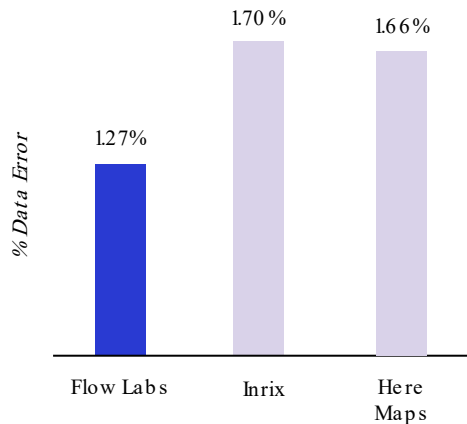

- Recently conducted validation by **Maricopa Association of Governments (MAG)**
- Comparison of Flow Platform data penetration rates comparing with **49 ground truth studies over 18 months** down to 15-minute granularity.
- **Average penetration rate of 29.1%**
- **Stable penetration rates across times of day, days of week, volumes.**
- **Average R² value of 0.97**

Higher penetration means higher accuracy volumes and delay measures

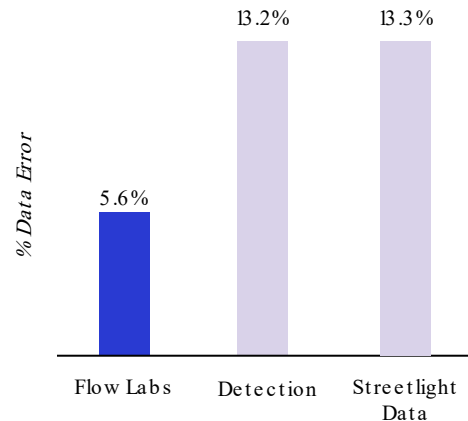

The Flow Platform captures the highest penetration rates in the industry today

Higher penetration rates result in lower data error for speed and delay measures

Higher penetration rates result in lower data error for volume and turning movement counts

Probe data can provide detailed, important insights for traffic signal operations

Traffic signal management requires a lot of work

Instantly identify signal problems and prioritise corridors

Today, agencies and engineering teams are using Cerberus to:

1. Proactively Identify Signal Operations Issues:

- a. Generate Daily/Weekly/Monthly alerts and notifications
- b. Generate real-time incident alerts
- c. Monitor trends

2. Generate Health Scores and Prioritize Signals

- a. Create custom scoring systems on-the-fly
- b. Allocate resources effectively

3. Prioritise Corridors for Retiming

Key Benefits

- Identify issues instantly
- Prioritise corridors automatically
- Eliminate routine maintenance visits

Streamline data collection and vehicle turning movement counts

	Manual Counts	Pneumatic Tubes	Video Sensors	High Penetration Probe Data
Pedestrian Counts	Yes	No	Yes	NO
Vehicle Classification	Yes	Yes (but limited accuracy)	Yes	NO
Total Time for Data Collection	On-site presence for multiple staff. 3-5 days	Setup, removal, data processing. 3-4 days	Setup, removal, data processing. 3-4 days	24 hours
Ordering Lead Time	1-2 Weeks	1-3 Weeks	2-8 Weeks	24 hours
Timeframe	2-8 hours	24-48 hours	24 hours - 1 month	1 Month
Vehicle Count Accuracy	98.5%	90-95%	84-98%	92-97%
Cost	\$300 - 500	\$500 - 1,200	\$500 - 2,000	\$75 - 150

Simple, intuitive, comprehensive analytics and diagnostics provide complete regional visibility

Today, agencies and engineering teams are using Abacus to:

- 1. Visualize Data for their Traffic Signals**
- 2. Generate Data for Reporting Purposes**
 - a. Easy data export options
 - b. Easy chart export options
- 3. Diagnose Signal Timing Issues**
 - a. Conduct diagnostic analysis
 - b. Conduct trend analysis

Key Benefits

- Eliminate unnecessary fieldwork including drive tests
- Identify root causes faster
- Streamline reporting

Conduct a rapid before and after analysis of any signal - related project

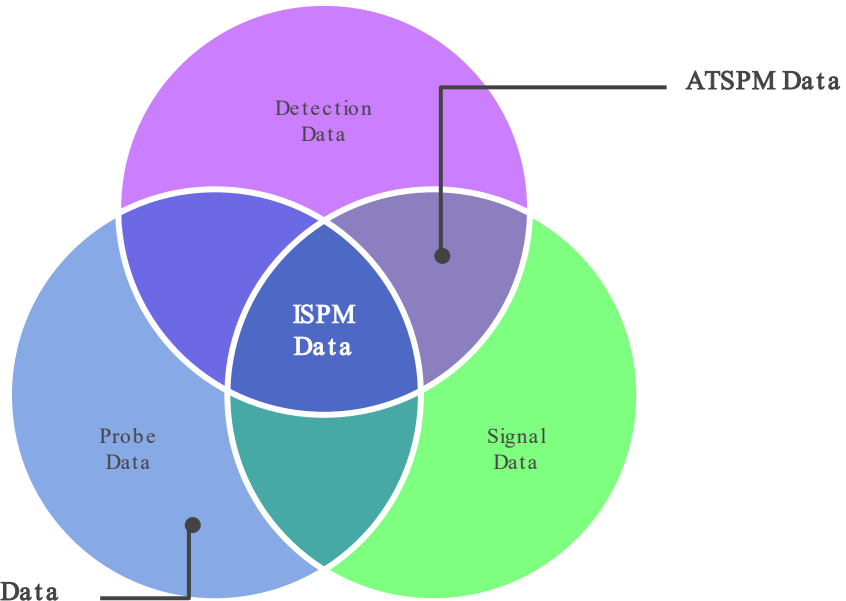

Today, agencies and engineering teams are using Litmus to:

- 1. Generate Before-After Analyses**
 - a. Easy data export options
 - b. Simple attribution of changes
- 2. Fine-Tuning Signal Timing Changes**
- 3. Project Reporting and Grant Funding**

Key Benefits

- Measure ROI of signal-related projects
- Capture more buy-in and secure funding
- Streamline reporting

Integrating HPPD and ATSPM data can provide consistent, comprehensive data for signal operations

- **Probe Data:** Capture historical and real-time data directly from vehicles.
- **ATSPM Data:** Capture data from detection devices and controller logs.
- **NTCIP Data:** Capture data from controller configurations.

Probe data can provide detailed, important insights for traffic signal operations

Detection data is inaccurate, which leads to poor traffic signal performance

- Largest detection quality study in the United States in collaboration with **Utah Department of Transportation** studying 435 detectors.
- Average accuracy of **86.8%**
- **Less than 27.8%** were generating data accurate to greater than 90%.

Bad detection means bad performance for all signal systems

Bad Detection Impacts Signal Controllers:

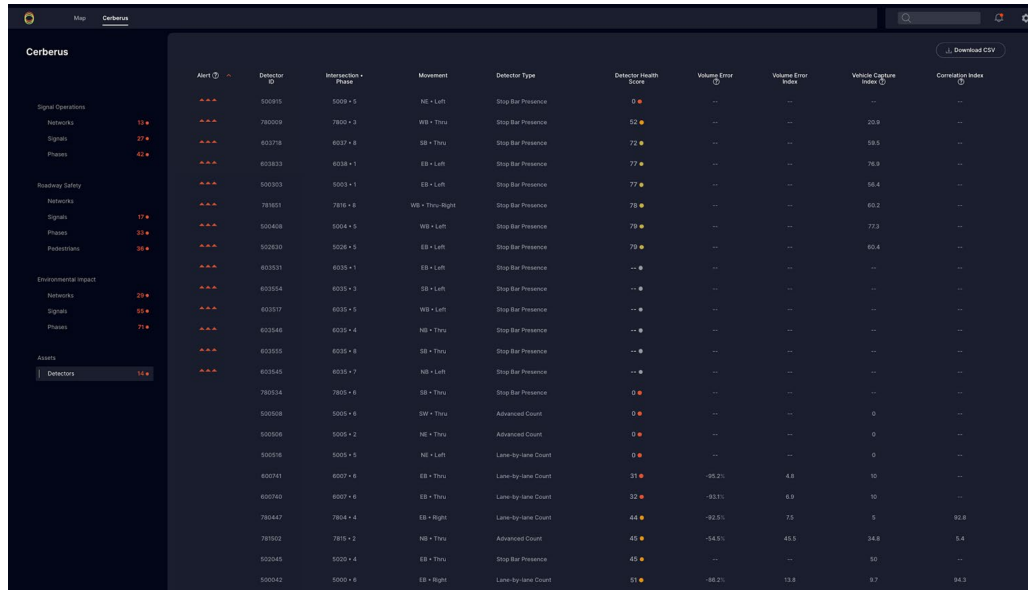

- **50 % of signal operation issues** are caused by poorly performing detection

Bad Detection Impacts Signal Performance Measures:

- Of the proactive alerts that were captured by these systems, **49.3% were false alarms.**
- Because of poor data quality, these systems **missed 83.1% of major issues.**

USE CASES

Instantly identify broken, or inaccurate detection and still provide accurate data

The screenshot shows the 'Cerberus' dashboard with a 'Map' tab selected. The main table displays detector health and performance data. The table has columns for Alert, Detector ID, Intersection + Phase, Movement, Detector Type, Detector Health Score, Volume Error, Volume Error Index, Vehicle Capture Index, and Correlation Index. The data is grouped by categories like Signal Operations, Roadway Safety, Environmental Impact, and Assets. The 'Assets' section is expanded, showing a list of detectors with their respective health scores and error rates.

Alert	Detector ID	Intersection + Phase	Movement	Detector Type	Detector Health Score	Volume Error	Volume Error Index	Vehicle Capture Index	Correlation Index
Signal Operations	500915	5009 + 5	NE + Left	Stop Bar Presence	0	---	---	---	---
Networks	780009	7800 + 3	WB + Thru	Stop Bar Presence	52	---	---	20.9	---
Signals	803718	8037 + 8	SB + Thru	Stop Bar Presence	72	---	---	59.5	---
Phases	803822	8038 + 1	EB + Left	Stop Bar Presence	77	---	---	76.9	---
Roadway Safety	500303	5003 + 1	EB + Left	Stop Bar Presence	77	---	---	56.4	---
Networks	781001	7810 + 8	WB + Thru-Right	Stop Bar Presence	78	---	---	60.2	---
Signals	500408	5004 + 5	WB + Left	Stop Bar Presence	79	---	---	77.2	---
Phases	502830	5028 + 5	EB + Left	Stop Bar Presence	79	---	---	60.6	---
Pedestrians	803531	8035 + 1	EB + Left	Stop Bar Presence	---	---	---	---	---
Environmental Impact	803554	8035 + 3	SB + Left	Stop Bar Presence	---	---	---	---	---
Networks	803517	8035 + 5	WB + Left	Stop Bar Presence	---	---	---	---	---
Signals	803548	8035 + 4	NB + Thru	Stop Bar Presence	---	---	---	---	---
Phases	803555	8035 + 8	SB + Thru	Stop Bar Presence	---	---	---	---	---
Assets	803545	8035 + 7	NB + Left	Stop Bar Presence	---	---	---	---	---
Detectors	780014	7800 + 6	SB + Thru	Stop Bar Presence	0	---	---	---	---
	500908	5009 + 6	SB + Thru	Advanced Count	0	---	---	0	---
	500906	5009 + 2	NE + Thru	Advanced Count	0	---	---	0	---
	500518	5005 + 5	NE + Left	Lane-by-lane Count	0	---	---	0	---
	800741	8007 + 6	EB + Thru	Lane-by-lane Count	31	-95.2%	4.8	10	---
	800762	8007 + 6	EB + Thru	Lane-by-lane Count	32	-93.1%	6.8	10	---
	780447	7804 + 4	EB + Right	Lane-by-lane Count	44	-92.5%	7.5	5	92.8
	781002	7810 + 2	NB + Thru	Advanced Count	45	-54.5%	45.5	34.8	5.4
	500345	5003 + 4	EB + Thru	Stop Bar Presence	45	---	---	50	---
	500542	5005 + 6	EB + Right	Lane-by-lane Count	51	-88.2%	15.8	9.7	94.3

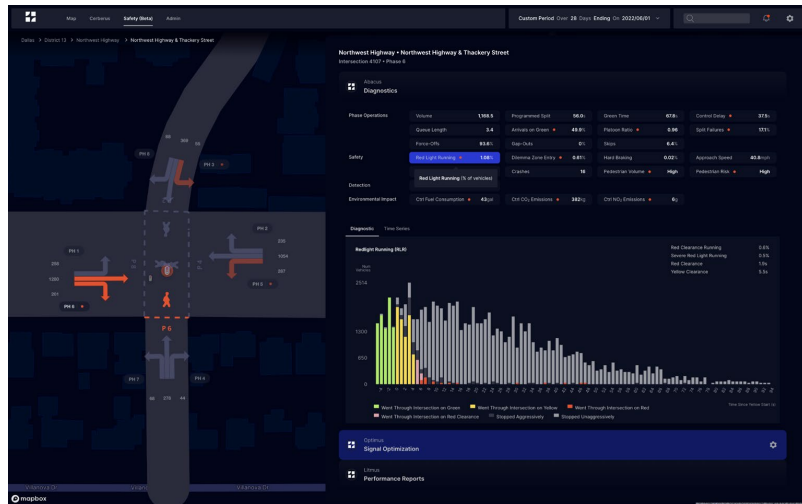

Today, agencies and engineering teams are using Detection Health to:

1. Proactively Monitor Detection
2. Prioritize Detection Maintenance
3. Measure accuracy of detection technologies

Key Benefits

- Identify issues instantly
- Prioritise maintenance
- Improve data quality

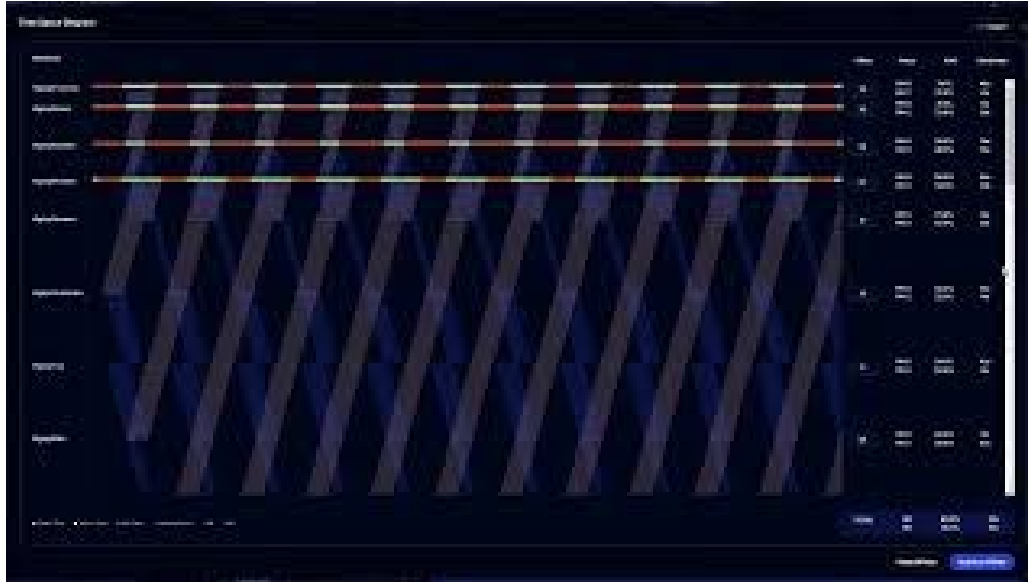

Capture Red Light Running (RLR) without requiring any hardware devices

- **ATSPMs** capture hi-resolution data on signal and detection events at intersections.
- Combining probe data with signal data enables the capture of Red Light Running (RLR) and Dilemma Zone Entry (DZE) without requiring any hardware.
- Use diagnostic tools to identify suitable clearance rates.

USE CASES

Instantly optimize signalized corridors just using probe data

Today, agencies and engineering teams are using Optimus to:

1. Streamline Signal Optimization Processes
2. Predict Signal Timing Change Impacts
3. Optimize Corridors for Safety

Key Benefits

- Reduce signal timing costs and time
- Improve mobility and roadway safety
- Eliminate unnecessary signal timing projects

ACCESSING DATA

At Flow Labs we're making accessing data and insights easier than ever for agencies and engineering firms

Making it easier than ever for agencies to access data quickly and affordably:

1. Flexible and Affordable Pricing
2. Short-Term Data Subscriptions
3. Historical and Live Data
4. Rapid Deployment

Get in touch!

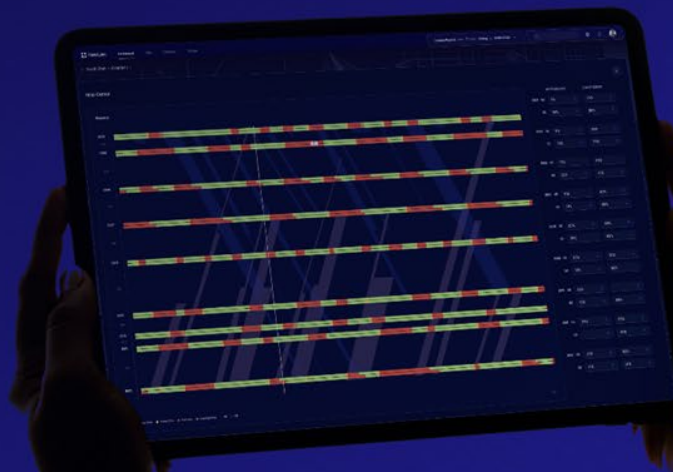

sales@flowlabs.ai

Summary

- High-penetration probe data is a necessity for agencies to ensure coverage, accuracy, and redundancy.
- Integrated data can ensure the highest quality of data for mission-critical applications including real-time operations.
- Use accurate digital twins for decision support and accelerate engineering productivity.
